

AQUATRACTAN

AQU018A

An efficient attractant for fish and/or peneid shrimp

PROPERTIES

- Chemical "signal" is first needed to ignite the sequence of feed behavior: recognition, ingestion, swallowing.
- Adding attractants can improve the acceptability and the palatability of artificial diets by fish and/or shrimps.
- **AQUATRACTAN** is an attractant, appetite stimulator, flavor enhancer for aquatic feed and fishes. Its formula includes various ingredients recognized for their impact, plus aromatic flavor with direct impact and positive "memorization" of the aromatic signal at brain level. This creates a true recognition and loyalty of the animal to the feed.
- **AQUATRACTAN** Increase feed attractability, palatability and location.
- **AQUATRACTAN** Reduce the level of uneaten or wasted feed, resulting in improved feed conversion and water quality.
- **AQUATRACTAN** Increase eating behavior and appetite to insure ration consumption.
- The use of **AQUATRACTAN** boosts the feed intakes and by consequence increases the body weight gain.
- The supplementation of the diets with **AQUATRACTAN** significantly improves the performances of the on growing
- **AQUATRACTAN** water soluble tastes and smells act directly through chemoreception by receptors cells and insure fast location and rapid ingestion and then stimulate the appetite for complete consumption of the daily feeding ration.

INGREDIENTS

- Concentrate of yeast protein with amino acids and peptides
- Nucleotides
- Betain
- Selected natural flavoring substances especially selected for their powers of recognition and "addiction".

Product only for fish and shrimp feed

USE AND PRESENTATION

- Recommended incorporation rate: **1 kg per ton of meal mix before pelleting.**
- Conservation : 1 year in original, full, and closed packaging in dry environment.
- Packaging : 25 kg bags.
