

REGASUR

PA960

A powerful combination of organics acids and essential oils

PROPERTIES

The mode of action of **REGASUR** in fish diets can be described as follow:

- *Positive impact of preservation of the feed.*
REGASUR allows decreasing pH of the complete feed and reduce development of pathogenic bacteria.
- *Beneficial effect on nutrient utilization*
During period of high feed intake, acidification of stomach is lowered. **REGASUR** reduce pH in duodenum and improve nitrogen retention. The digestibility of nutrient is significantly increased.
- *Improvement on digestive flora*
REGASUR help to select positive flora and encouraging colonization of the gastrointestinal tract by beneficial strains like lactobacillus (lactic acid bacteria, etc.).

MAIN INGREDIENTS

Benzoic acid, formic acid, essential oils, Mixture of aromatic substances.
Total pure acids : 66.2%

DIRECTION OF USE

	Fish (Kg/Ton. of feed)	
	Starter & Growth	Pathological Problems
REGASUR	2	4
