

# T-MOLD

PA114HB

*An efficient and cost effective mold inhibitor*

## PROPERTIES

---

- The moisture of the air and heat are factors of risks of the development of fungi in the agricultural raw materials and animal feed during storage.
- The development of these fungi, although sometimes invisible, is an important source of degradation of the animal feeds: color, taste, aspect, production of mycotoxins... Besides this, the fungi use for their development the nutritional resources of the products and degrade them, resulting in decrease of their nutritional value, and affecting the zootechnical performances.
- **T-MOLD**, **AQUA TECHNA**'s mold inhibitor, is used for all animal species feeds. Thanks to its mixture of organic acids salts selected by **AQUA TECHNA**, **T-MOLD** is efficient on a broad range of micro-organisms. **T-MOLD** allows to rapidly and significantly cut down molds proliferation and their production of mycotoxins, and thus to ensure a better conservation of the agricultural raw materials and animal feed.
- **T-MOLD** is a non corrosive product.

## COMPOSITION

---

- Calcium propionate, Calcium formiate

## USE AND PRESENTATION

---

- **T-MOLD** is in powder form, in 25kg bags.
- **T-MOLD** is used at 0.05% to 0.1% in the complete feed (equivalent to 0.5 to 1 kg per ton of complete feed).
- Use for animal feed purpose only.
- Storage : should be stored in a dark and cool dry place
